

Growing Troughs

Growing Troughs

Growing troughs for all situations

GVI system has a long tradition of supplying troughs and gutters to meet the diverse requirements of growers and specialist crops. The original table mounted gutters and hanging gutters are still leading products in our range.

In recent years, an intensive product development programme, in co-operation with leading growers and crop advisers, has resulted in new innovative trough designs, which are aimed at the future demands of cropping technology and protection of the environment.

The troughs are designed to be an integral part of re-circulating systems, which reduce water and fertilizer costs and safeguards the environment.

GVI system's troughs and gutters are fabricated from only the highest quality materials, ensuring a typical minimum useful life of 10 to 15 years. All GVI system troughs and gutters meet with the standards set by the Danish Food Industry Control Authority. This is why GVI system trough and gutter systems is the best investment value for the future.

The Growing troughs and gutters offer you:

- Best investment value
- Designs to meet every application
- Increased production capacity - more plants/m²
- Increased production efficiency - less labour=less time
- Integration with our own irrigation systems

Accessories

A wide range of accessories is available for all types, making it easier for growers to install the troughs.

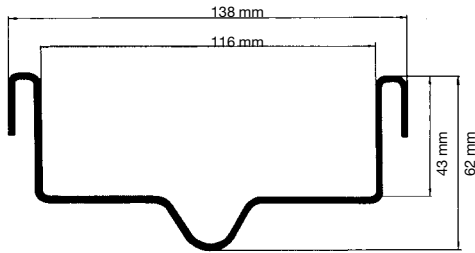

Super NFT system

Is specially developed for growing tomatoes, but is also ideal for peppers and melons. The picture is from 50.000 m² of tomatoes and cucumbers in the Ukraine.

GVIsystem

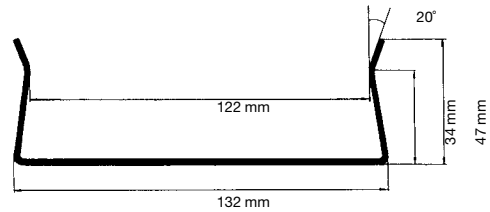

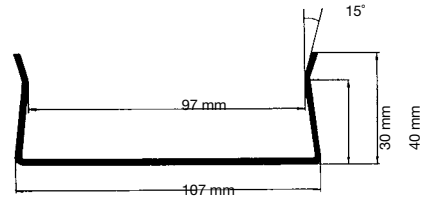

A part of Danvan Group

Hanging gutter 116

Specially designed for suspension. Installation and adjustment can be performed without using tools.

Growing trough PM 100 - PM 125

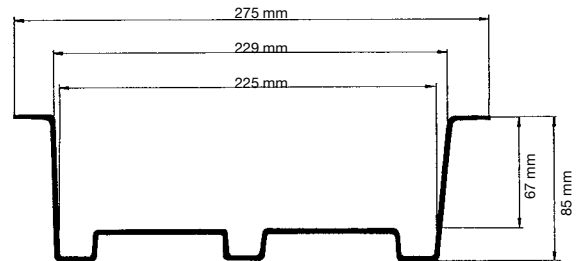

Adequate for systems with recirculating, running water.

Growing trough HS 100

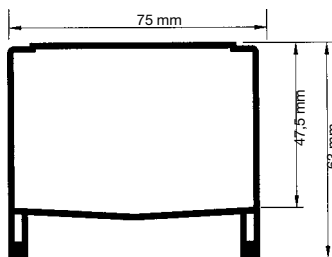

Specially designed for ebb/flow irrigation systems on tables. Suitable for any bench type.

Growing trough 225

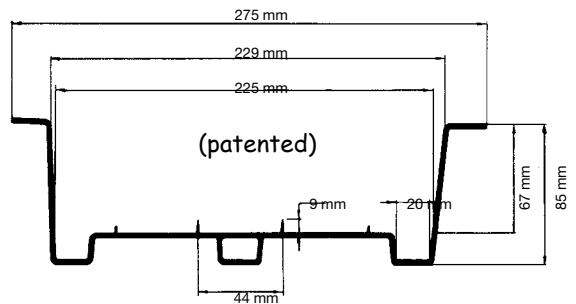

Specially designed for Rockwool and drip irrigation.

Lettuce/herbs trough

Specially designed for lettuce/herbs in hydroponic systems.

Growing trough NFT 225

Specially designed for hydroponic systems.

Technical specifications:

Material:

- Rigid plastic
- Hard
- Impact-resistant
- Deformation-resistant
- Durable

Colour:

- White
